Bourns® Trimpot® Product Line Announces Open Frame Product Improvements

Recently several improvements were made to the Bourns® Models 3306 and 3309 open frame single-turn cermet trimming potentiometers. The new manufacturing process has increased volume, prepared for lead free solder processing and improved both resistance tolerance and temperature coefficient.

A comparison of the minor dimensional differences, as well as a complete listing of the electrical and environmental characteristics may be reviewed in the Partnership Library at <http://www.bourns.com/brain2/PartnershipLibrary.asp>.

Changes to the How To Order matrix and outline drawings are also highlighted. New units began shipping in July 2003. There is a possibility that both the new and old styles may be shipped during the transition. Samples of the new units are available upon request.
