Bourns® Inductive Components Product Line Announces Marking Color Change of Models SRU10xx and SRU80xx

Bourns® Inductive Components Product Line announces a change in the *marking* color of the following models:

SRU1028
SRU1038
SRU1048

SRU8028
SRU8043

Presently, the marking consists of black characters on the top of the ferrite-based power inductors. The new marking will consist of white characters on the top of the inductors. The marking content will remain the *SAME*. The *ONLY* change is the color.

The physical and electrical properties of the noted models with white characters are *IDENTICAL* to the properties of those with black characters. Processing guidelines for models with white characters are *IDENTICAL* to guidelines for those with black characters.

During the transition, some shipments may contain a mix of product marked with white or black characters, but no single reel will contain inductors with both white and black marking.
